NAME: CHANDRAVEER SINGH

REG.NO:25MEI10031

BRANCH:INT.M.TECH (CYBER SECURITY)

YEAR: 1 YEAR

COURSE CODE :CSE0001

DATE:31 MARCH 2026

INTRODUTION

Project Overview:

This project is based on digital literacy and aims to develop essential skills like how to use Canva to crate digital literacy template etc. and required to use digital platforms safely and effectively. In this projects there is 5 task we need to do and its covering different aspects such as

task-1-presentation

task-2-portfolio

task-3-platforms

task-4-email-etiquette

task-5-cybercrime

some points about tis 5 task

1. creating an awareness infographic

2.building a professional digital portfolio

3.exploring coding and collaboration platforms,

4.understanding email etiquette

5.and learning about cybercrime and its prevention.

6.Through these tasks we students gain some practical experience in using tools like GitHub, Linkedin, Google Forms, and coding platforms. The project also focuses on improving communication skills, online presence, and awareness of digital safety.

Scenario:

As a Student Digital Ambassador. I was assigned to help my peers understand how to navigate the digital world responsibly. I created some poster ,accounts and completed tasks that demonstrate safe internet practices, professional communication, and cybercrime awareness. During this process, I explored various platforms, built my online profiles, and learned how small mistakes like clicking unknown links or poor email communication can cause serious issues. This project highlights the importance of being digitally aware and responsible.

TASK-1

Create a Digital Literacy Awareness Infographic

In Task 1 - I created a digital literacy awareness infographic using Canva. The purpose of this infographic was to help students understand the importance of digital literacy in a simple way. My design focused on three key topics: what digital literacy is, useful digital tools for students, and safe internet practices.

In the first topic - what is digital literacy is

1.Ability to use digital devices

2.Find and evaluate information

3.Communicate online effectively

4.safe on internet

. In the second section, I included examples of How can internet become safe

1.Don't share personal information (password, OTP, address)

2.Use strong and unique passwords

3.Avoid clicking unknown links or ads

4.Keep your software and apps updated

5.Use secure websites (HTTPS)

6.Be careful on public Wi-Fi

7.Download only from trusted sources

8.Log out from shared devices

In third question digital tools are useful for student

1.Google Docs – Notes & assignments likhne ke liye

2. Google Classroom – Homework aur submissions manage karne ke liye

3.Zoom / Google Meet – Online classes attend karne ke liye

4. Grammarly – Grammar aur writing improve karne ke liye

5. Canva – Presentations aur designs banane ke liye

6. YouTube – Learning videos aur tutorials ke liye

Reflection -

While creating the infographic, I found it interesting to present important information in a simple and attractive format. One challenge I faced was selecting the right design and layout to make the content clear without overcrowding the visual. Overall, this task helped me understand the importance of digital awareness and effective communication through visuals.

TASK2

BUILD MY Student Digital Portfolio

In Task 2 I created and updated my digital portfolio by editing my profiles on key professional platforms such as GitHub ,Kaggle, Linkedin. These platforms are important for students as they help in building an online presence and showcasing skills to recruiters and academic professionals.

On GitHub, I created a profile README that includes my name, branch, year, and a short description of my learning goals.

This platform is mainly used for sharing projects, code, and collaborating with others.

On LinkedIn, I updated my education details, including my current degree, institution, and expected graduation year. LinkedIn is useful for professional networking, connecting with industry experts, and exploring internship opportunities.

In Kaggle I also created a profile on Kaggle, which is a platform used for data science and machine learning. It allows users to work with datasets, participate in competitions, and improve analytical skills.

Next 4 year planning-

Over the next four years, I plan to regularly update my GitHub with projects and use LinkedIn to build connections, learn from others, and explore career opportunities. This task helped me take the first step towards building a strong digital presence.

Task 3

Explore Coding & Collaboration Platform

In Task 3it is divided in two part were-

Part a- Coding Practice

I explored an online coding platform called HackerRank which is widely used for practising programming and improving problem-solving skills.

HackerRank provides various challenges for beginners as well as advanced coders and is commonly used by students to prepare for coding interviews.

To begin, I created an account on HackerRank using my email. After logging in I navigated to the Practice section where different programming qustions are available. I selected the basic problem-solving section and found a beginner-level challenge called "Solve Me First." This problem is designed for new users to understand how to write and submit code on the platform.

I opened the challenge, read the problem statement, and wrote a simple program to add two numbers. After writing the code, I submitted it and successfully passed all test cases. This task helped me understand how coding platforms work, how to read problem statements, and how to submit solutions online. It was a good starting point for my coding journey.

Part B – Google Workspace Collaboration :

In Task 3 Part B, I used Google Forms to create a "Digital Literacy Awareness Quiz" for students.

Google Forms is an online tool that allows users to create , quizzes, and collect responses easily.

To create the form I opened Google Forms and selected a blank form template. I added a title and description related to digital literacy awareness. Then I created five questions, including both multiple-choice and short-answer types, to test basic knowledge about safe internet practices and digital tools. These question are-

1.What is digital literacy ?

A. using only mobile phones

B. ability to use digital tools

C. using for calls

D. watching videos

2.Name any two digital tools(SHORT ANSWER TYPE)

3.Which of the following is a digital tool for students?

A.Blackboard

B.Pencil

C.Google Docs

D.Notebook

4.Which platform is used for online meetings?

A. YouTube

B. Zoom

C. Instagram

D. WhatsApp Status

5.Which is a safe internet practice?

A. Sharing passwords

B. Clicking unknown links

C. using secure websites(https)

D. Talking to strangers

After completing the form, I used the send option to generate a shareable link. I also checked the 'Responses' section, where all submitted answers are automatically recorded. By linking it to Google Sheets, I was able to view and organize the responses in a structured format.

how these tools will help you academically-

This task helped me understand how to create online quizzes and collect data efficiently. It is a useful tool for academic purposes, surveys, and feedback collection. In the future, I plan to use Google Forms for conducting quizzes and gathering information in an organized way.

Task 4

Draft a Professional Email & Etiquette Guide

These also divided in two parts-

Part A – Write two professional emails: where I need to create a two email 1.email is a student to their professor requesting an extension on an assignment submission deadline.

Email2 is a student to an internship coordinator at a company, expressing interest in a summer internship opportunity.

Both emails are include: a clear subject line, a professional greeting, a well structured body, and a proper sign-off. Save both drafts as plain text.

Part B – Create a Social Media Do's and Don'ts checklist:

I create checklist in notepad and this checklist inside task-4-email-etiquette/ as a separate file called social-media-checklist

Responsible social media use as a college student

WE CAN DO:

1.Think before you post (avoid harmful or inappropriate content)

2.Protect your privacy (don't share personal information)

3.Use respectful language (no hate or bullying)

4. Avoid wasting too much time (manage screen time)

5.Share useful and positive content.

WE CAN`T DO :

1.Don't accept friend requests from strangers

2.Don't click on suspicious links or unknown messages

3. Don't use weak or same passwords everywhere

4. Don't share others' photos/videos without permission

5. Don't ignore privacy settings (keep them updated).

A student once sent an email to a professor without a proper subject line, greeting, or clear message. The email was written in an informal tone and lacked important details, which caused confusion. As a result, the professor ignored the email, and the student missed an important deadline.

This situation shows how poor digital communication can lead to problems. If the student had used a clear subject line, polite greeting, and proper structure, the message would have been understood easily. Professional communication is important in academic and professional environments, and following basic email etiquette can prevent misunderstandings and ensure effective communication.

Task 5: Cybercrime Awareness Case Study & Prevention Guide

Tis is also divided in two parts

Part A – Case Study: in tsi part I write about cyberbulling . what the crime is, how it typically happens (step-by-step), who is usually targeted, and what the consequences are.

Part B – Prevention Checklist:

I created a 'Stay Safe Online' checklist with at least 8 specific, actionable prevention tips relevant to college students in India. At least two tips must be specific to financial/UPI safety. . Include the reporting channel: National Cyber Crime Portal (cybercrime.gov.in) and Helpline 1930.

While working on this task, I was surprised to learn how easily people can become victims of cybercrime, especially through simple tricks like fake messages and links. I realized that many users are not fully aware of how these scams work. One important habit I will change is being more cautious while clicking on links or sharing any personal information online. I will always verify the source before taking any action. This task increased my awareness about online safety and made me more

responsible while using digital platforms.

Conclusion

This project enhanced my understanding of digital literacy and its importance in daily life. By completing tasks like creating an infographic, exploring platforms such as Kaggle, solving problems on HackerRank, and analyzing cybercrime cases, I developed practical knowledge of digital tools and online safety. I learned to reliable information, protect personal data, and stay alert against online threats. These activities also improved my problem-solving and critical thinking skills. Overall, the project made me more confident and responsible while using technology, and I will apply these learnings to ensure safe and effective participation in the digital world.
